2) Creating groups & maintain group Membership in windows server 2008.

\* Creating groups

=> To create a group, click on start -> administrative tools -> Active directory users and computers console

=> Then ~~click~~ Right-click the users container, chooses New from the pop-up menu, and chooses group from the submenu.

=> then New object - group dialog box is open enter the name of the group in the first field you'll see the name you enter each ed in the second field.

=> After naming the group, you have to select the group scope and group type option, the group scope section refers to how widely the group is populated throughout a domain:

=> Domain local groups exist only within a single domain and can contain members only from that domain.

=> Global groups can contain members only from the domain in which they exist

=> Universal groups exist throughout an organization even when the organization network is made up of many individual domains.

=> Finally, click ok to create the group. You can add members to the group.
